

What could a criminal do with the information in **your database**?

Last year, 43% of companies experienced a data breach; of those, 85% were small businesses. Worse, a 2013 study estimated a cost of \$188 per compromised record - which adds up quickly.

It's not only hackers who pose a risk. 3 out of 4 breaches are the result of human error, for instance, when a laptop is stolen out of a parked car or records are accidentally disposed of improperly.

Recovering from a data breach can cost a business thousands of dollars in fines and lost reputation.

Cyber liability insurance covers expenses such as lost revenue, notification and credit monitoring for affected customers, and crisis and reputation management. Without insurance, these costs can seriously disrupt or even shut down a small business.

Policies are available at a price you can afford and can be tailored to your specific needs, ensuring your business continuity even if the worst happens.

Stewart's United Agencies can help you protect yourself, your business and your family.
